

Screamer

Detect fridge breakdowns *BEFORE* they happen

The major causes of fridge breakdowns – blocked and clogged condensers and fan motor failures – can now be detected and fixed early before expensive repairs have to be made. Fridge breakdowns seldom 'just happen'. Early detection of the first subtle signs of a fridge problem can save you thousands of Rands. Before you know it the damage is being done. The compressor struggles and overheats. At the same time the fridge can use up to 30% more electricity. Then burnout! Your compressor goes down. Now it's a really expensive repair. And if it's frozen or chilled foods, you can lose all your stock

Stop stock loss & costly repairs

It's easy to prevent this. Screamer, a new patented fridge electronic early detection system is designed for South African conditions. It lets you know early on when your fridge is getting sick, well before you can notice it. True to its name, you and your staff will not miss its loud alarm. Screamer is quick and easy to install yourself. And it is so well priced that you can put it in all your fridge units. Simply stick the temperature probe between the condenser fins while magnets fix the alarm unit to the fridge. Ideal for beverage coolers, ice cream cabinets, self-contained chillers, freezers and simplex remote refrigeration units.
